ITN Description and Specifications

- **ITN Title:** ‘FL 4x Late’ Annual Ryegrass Cultivar
- **ITN No.:** ITN26-02
- **ITN Territory:** As proposed by ITN Respondents.
- **ITN Announcement Date:** April 24, 2026
- **ITN Proposal Due Date:** Friday, June 5, 2026, 12PM ET
- **Cultivar Description:**

‘FL 4x Late’ is a late maturing tetraploid forage-type annual ryegrass developed in Gainesville, FL by the University of Florida’s Forage Breeding and Genetics Program. ‘FL 4x Late’ is a consistently high yielding variety with a high level of gray leaf spot resistance caused by *Pyricularia oryzae* and crown rust resistance caused by *Puccinia coronata*. ‘FL 4x Late’ has been evaluated extensively in the coastal plain’s region of the southern U.S. and is expected to perform well across the southern U.S. annual ryegrass growing region. Fifteen pounds of clean breeder seed is available for seed production start-up.

As shown in Tables 1, 2 and 3, overall dry matter yields (DMY) (lb/acre/season) of ‘FL 4x Late’ were statistically higher compared to selected commercial cultivars over multiple locations and years. A bolded and “*” entry had significantly greater DMY than the best control and population mean. A bolded and underlined entry was not statistically different than the best control but produced higher DMY compared to the other controls and the population mean. LSD values from Hague, FL and Citra, FL are at P=0.05, and from Georgia at P=0.10.

As shown in Tables 4 and 5, 'FL 4x Late' has been found to have excellent resistance to foliar diseases and an early maturity date over multiple years and locations. "CR" indicates Crown Rust caused by *Puccinia coronata* Corda, "GLS" indicates Gray Leaf Spot caused by *Pyricularia oryzae* Cavara, and "BIP" indicates Bipolaris caused by *Bipolaris sorokiniana*. All ratings are on a scale of 0 to 10 where 0 = no disease and 10 = 100% coverage. A bolded and "*" entry had significantly greater DMY than the best control and population mean. A bolded and underlined entry was not statistically different than the best control. LSD values from Hague, FL and Citra, FL are at P=0.05. Maturity was determined by the date of first anthesis.

What is an ITN?

Newly developed cultivars, experimental lines, and plant germplasm are routinely approved for release through UF's Florida Agricultural Experiment Station (FAES). Florida Foundation Seed Producers, Inc. (FFSP), a non-profit corporation and direct support organization of the University of Florida, is continuously seeking strategic production and marketing companies in commercialization of a diverse portfolio of newly developed plant cultivars. For certain crops, several companies may express interest in an opportunity for an exclusive license for an improved plant cultivar. The Invitation to Negotiate (ITN), implemented in 2006, is a process which enables FFSP to fairly and objectively evaluate all commercial proposals and comments to effectively identify superior companies to deliver new cultivars to the public. In return, licensed companies provide royalties back to FFSP for reinvestment in the breeding and development of new, improved cultivars at the FAES.

The ITN process encourages an open engagement of all interested companies and stakeholders. Companies submitting proposals and/or comments to an ITN will be evaluated consistently and fairly by a review committee comprised of staff members of FFSP and expert faculty advisors from FAES.

FFSP strives to secure the partner/partners that best meet the needs of the State of Florida and its people, UF, and the FAES breeding program. Responders to the ITN will be evaluated using a consistent methodology, allowing review committee members to weigh core elements and objectively evaluate multiple proposals. The ITN specifications objectively guide critical responses in a proposal and are designed to explore the project's commercial scope for a sustainable business, consistent with the necessity to deliver FAES plant breeding products and technology to the public. The ITN requires interested companies to describe their prior experience and current business model. Companies are asked to describe a plan of action concerning the new business opportunity. The ITN also requests details of marketing and production plans which will successfully deliver a sound commercial operation and ensure that sustaining royalties are returned to support the FAES breeding program. Initiation of an ITN and the participation by a company in an ITN process does not mean an exclusive agreement will be eventually awarded; only that responsive companies will receive consideration and a fair evaluation of proposals and comments submitted.

At the conclusion of the ITN process, it is everyone's hope that most details can be mutually agreed upon, resulting in an award of a license to a qualified and successful partner.

Please refer to the general conditions of this ITN for specific specifications and instructions.
